PROFILE

React and TypeScript developer, promoted to frontend lead within a year of joining Odyssey Cybersecurity. I own the frontend architecture for an enterprise security platform and the component library four of the company's products are built on, and I lead a team of three through a legacy rewrite. Outside work I ship full-stack side projects: AI products, fintech PWAs, developer tooling.

EXPERIENCE

Odyssey Cybersecurity · ClearSkies security platform Jun 2025 - Present · Nicosia, Cyprus

Lead Software Developer (Frontend)

May 2026 - Present

- Replaced a 7-layer architecture with a flat, conventional React structure, cutting the number of files a typical feature touches. Still building features in it day to day.
- Own the shared UI component library end to end. 40+ components on shadcn/ui, used by four products across the company, not just ClearSkies.
- Lead three frontend developers through mentoring and code review. Brought the team onto an AI-assisted workflow with Claude Code, now our default way of building features.

Software Developer (Frontend)

Jun 2025 - May 2026

- Built the client-side dashboard engine. Users compose their own dashboards from around 130 widget types, reordering and resizing on a grid. New widget types drop in without touching the engine.
- One of the core contributors on the rewrite from C#/Ext.NET to React, moving around 20 modules off the legacy stack and building the component systems that replaced it.

Medlo · Frontend Developer

Apr 2022 - May 2025 · Remote

- Sole frontend owner of a staffing and scheduling platform used across 10+ regions in Sweden.
- Shipped the original scheduling module, then three years of calendar-heavy features on top of it.
- Built the platform's first automatic shift-to-staff assignment engine.
- Also built the API endpoints for my own features, with Mocha unit tests covering them.
- Designed the UI myself. The team had no designer.

PrimoThePlug · Owner

Sep 2018 - Sep 2021

- Ran an e-commerce brand end to end: built the storefront and checkout, grew three social channels into recurring brand partnerships.

SELECTED PROJECTS

Trippio (live). Group trip planner: collect links, vote on them, build the schedule. Offline-first React PWA with an IndexedDB cache, WGS-84→GCJ-02 conversion for Chinese maps, and Claude-suggested time slots. · React, Express, MongoDB, Claude API

Tweetpreneur (live). Full-stack AI product that turns an X handle into a shareable business card. Angular 19 front end, Express/MongoDB backend with response caching over an OpenAI pipeline. · Angular, Express, MongoDB, OpenAI

FormForge. React form library. 15+ typed, composable field components behind one declarative schema API, with a live-preview docs site and a visual form builder. · React, TypeScript, Design Systems

Parkit. Parking marketplace PWA, built for the Bank of Cyprus Fintech Hackathon. Live map, booking flow, QR check-in, realtime payments over WebSockets, vendor dashboard. · Angular, Leaflet, Socket.IO, PWA

SKILLS

CORE

TypeScript, React, Angular, Next.js, JavaScript (ES6+)

PLATFORM

Node.js, Express, REST, WebSockets, Tailwind, CSS/Sass

DELIVERY

Unit testing (Vitest, Mocha), Git, CI/CD, Design systems, PWA

EDUCATION

Computer Engineering · University of Cyprus

2018 - 2021 (not completed)

- Left in the final year to work as a frontend developer full-time.
